

HELMET MIRROR™

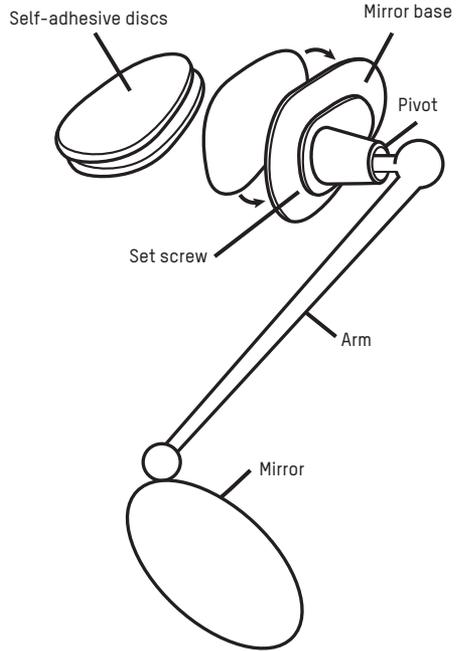

Small, Light and Fully Adjustable

Part# 2020203

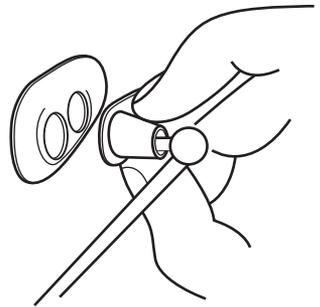

STEP ONE: Carefully position and press adhesive disc into place on the back of the mirror base.

STEP TWO: With helmet on your head, position the mirror on the left side of your helmet. Choose a relatively flat section.

Once you have the reflection required, remove adhesive backing and press mirror firmly in place.

FOR ADJUSTMENT: A set screw inside the pivot enables the arm to keep the mirror in your selected position. It may become necessary to tighten this screw with a 3mm allen wrench. Simply snap the pivot off the mirror base and tighten from the inside. Be careful to not overtighten as it may strip the threads inside the pivot.

WARNING: Objects in the mirror are closer than they appear.
